

WhatsApp Bulk Messenger

Personalized bulk messaging on WhatsApp free, browser-based and no saved contacts required.

A lightweight Flask + Selenium automation tool for personalized outreach at scale

The Problem With Sending Bulk WhatsApp Messages Today

Existing Tools Are Paid

- Most bulk WhatsApp senders on the market are subscription-based SaaS products
- Costs scale with contact list size or message volume
- Small businesses, students and NGOs are priced out of simple outreach

WhatsApp Broadcast Falls Short

- Native Broadcast Lists only deliver a message if the recipient has saved your number as a contact
- Cold outreach to new customers or leads is effectively impossible
- Businesses must manually ask every recipient to save their number first

Our Solution

A self-hosted web app that automates personalized WhatsApp Web sessions

How it works, in short:

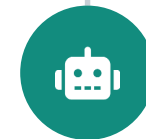

- Upload an Excel sheet with recipient phone numbers and names
- Write one message template with a {name} placeholder
- The app drives a real browser session on WhatsApp Web
- Each contact gets a personalized message sent automatically
- A live console streams progress and delivery status in real time

Upload contacts (.xlsx)

Write template with {name}

Selenium drives WhatsApp Web

Messages sent + logged live

Why It Matters #1

100% Free & Self-Hosted

No subscriptions, no per-message fees, no hidden tiers.

Paid Broadcast SaaS

Monthly plans, message caps,
pay-per-contact pricing

WhatsApp Bulk Messenger

Runs on your own machine
zero recurring cost, ever

Recipients Don't Need to Save Your Number

Native WhatsApp Broadcast

- Message only arrives if the recipient has YOUR number saved as a contact
- Otherwise, the broadcast message silently fails to deliver
- Unworkable for cold leads, new customers or one-time announcements

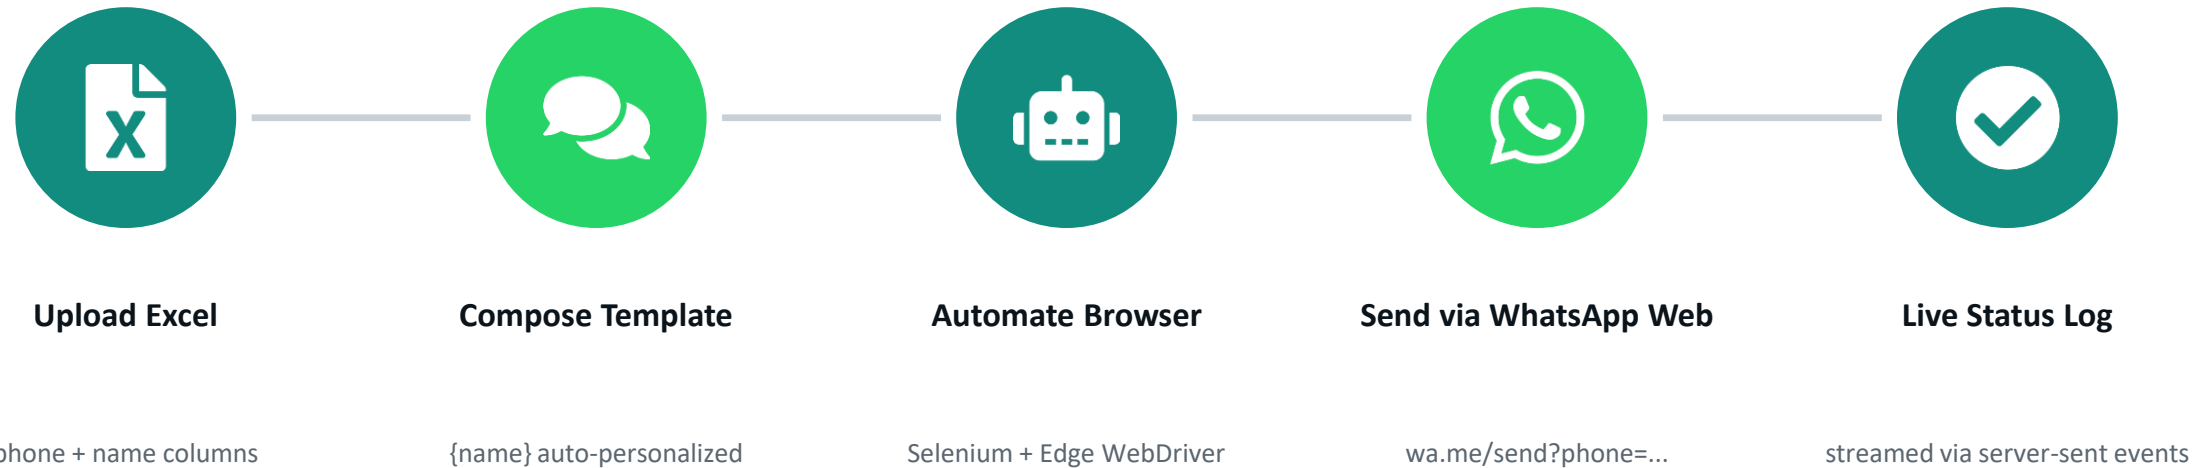

WhatsApp Bulk Messenger

- Opens each chat directly via WhatsApp's own [wa.me / send?phone=](https://wa.me/send?phone=) link
- Delivers regardless of whether the recipient has saved your number
- Perfect for first-time outreach, promotions and cold contact lists

How It Works

End-to-end flow from contact list to delivered message

The tool never uses the official WhatsApp Business API it drives an actual, logged-in browser session, the same way you would send messages manually, just automated and personalized at scale.

Core Features

Excel-Based Contact Lists

Simply provide a spreadsheet with phone and name columns no CRM or API setup needed.

Dynamic Personalization

Insert a {name} tag anywhere in your message; each recipient gets it filled in automatically.

Live Progress Console

A real-time streaming log shows every message opened, typed, sent or failed as it happens.

Browser-Based Automation

Built on Selenium + Edge WebDriver - drives your own logged-in WhatsApp Web session.

Completely Free

Open, self-hosted Flask app no subscriptions, licensing fees or usage limits.

No Saved-Contact Requirement

Messages reach recipients directly, even if they've never saved your number.

Under the Hood

A lightweight stack easy to run, easy to extend

Flask

Python backend serving the UI and campaign API

Pandas

Reads and validates the uploaded Excel contact list

Selenium + Edge WebDriver

Automates a real WhatsApp Web browser session

Server-Sent Events

Streams live campaign logs to the browser console

Who Can Use This

Small Businesses

Send promotions and offers to customer lists without paying for a broadcast platform

Event Organizers

Notify large guest lists individually and personally with names auto-filled in

Educators & Coaches

Reach students or trainees with reminders, updates or personalized notes

Community Groups

Circulate announcements to members without collecting their consent to save a number

Free. Personal. No Saved Contacts Needed.

WhatsApp Bulk Messenger removes the two biggest barriers to bulk outreach on WhatsApp: cost and the recipient's need to save your number, so anyone can send personalized messages at scale for free.

Free & self-hosted

No saved contact required

Personalized at scale

Real-time delivery logs

Thank you
